LEYENDA

T_e = coeficiente de transmisión del espectro solar
 R_e = coeficiente de reflexión del espectro solar
 A_e = factor de absorción solar
 T_v = coeficiente de reflexión del espectro visible

$g-total_e$ = Grado total de penetrabilidad energética para una protección solar «cerrada» ubicada en el exterior con acristalamiento, Cálculo en conformidad con SN EN 13363-1-A1, acristalamiento de referencia C en conformidad con EN 14501, $g = 0,59$, $U = 1.20 [W/m^2K]$
 $g-total_i$ = factor solar interior - acristalamiento de referencia C según EN 14501, $g = 0,59$, $U = 1.20 [W/m^2K]$
